The Wonder Years

The experience of dental school was enlightening, exciting, a time of personal growth, self evaluation, and self doubt. Challenges rivaled only by the years to come. From this mix of emotions comes the theme for our yearbook which we feel best describes this period of our lives . . . **THE WONDER YEARS** . . . As summer drew to a close before that first year, I can remember thinking that things would never be the same. This was going to be the last stop in the academic marathon, and I think we all felt the excitement, like a buzz in the air before a race.

The week before classes began saw many goodbyes and good-lucks, and we smiled nervously as the years of preparation had come down to just a few hours until the first class.

We had many orientation luncheons to attend and as professors and Deans spoke about dentistry and reminisced about their days in dental school I scanned that group of students and realized that like it or not I'd spend the four years with them. But the person I did come to know best was myself. Looking back on it now, time never moved so fast, yet so slowly.

September 6, 1989

Dear Class of 1990:

You are the first SDOS graduates of a bright new decade. During the 1990's the pace of society will grow ever greater and more complex as we move closer towards the 21st Century. The profession will require dentists who can lead the way as societal issues become more complicated. Are you ready to be the standard bearers for the profession, reflecting the great Columbia tradition?

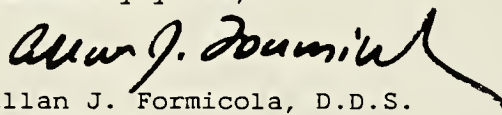

The answer to that question is Yes! Your Columbia years have challenged you to educate yourselves to the highest level possible, and you have met that challenge. The faculty have prepared you to understand the need for a professional person to answer problems with caring and high ethical standards, and you have shown us your willingness to do so. These attributes will be the ones which will make you stand out as true professionals and Columbia graduates.

When you reflect back to September 1986 and think about Columbia, remember that the school's goals and yours were one and the same. You wanted a thorough education so you could enter the profession well prepared. You successfully achieved that education. Although at times your choice of Columbia meant it would be difficult, by working through those difficulties each of you has grown. We hope that we played an important role in helping you find your individual strengths and talents.

We want you to know that Columbia will continue to be your home. As our brightest and newest alumni, the faculty will always continue to assist you as you face the challenges of professional life.

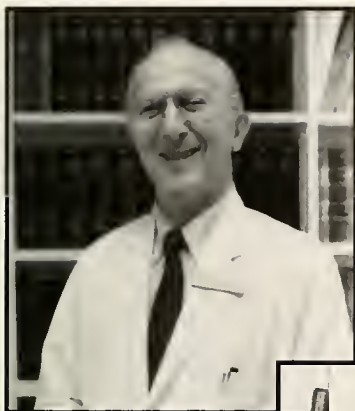

Please accept my congratulations on your accomplishment and personal best wishes as you begin your careers.

Sincerely yours,

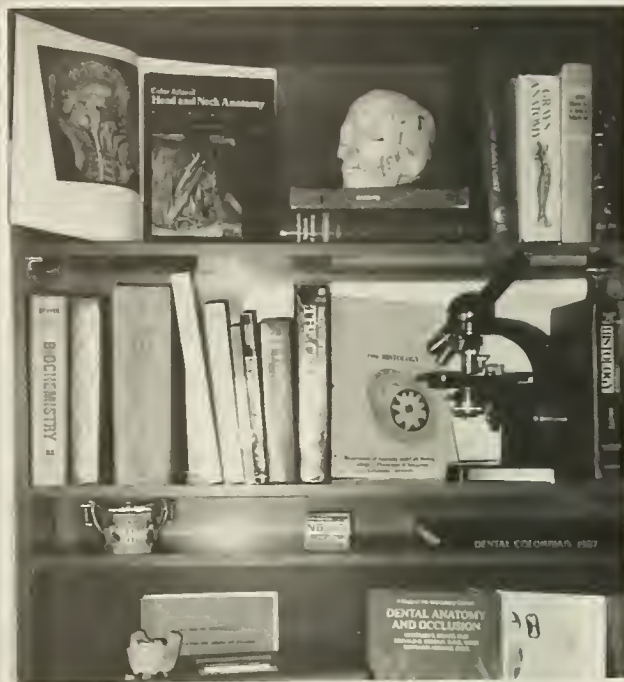

Allan J. Formicola, D.D.S.
Dean

Clock-wise: Allen J. Formicola, D.D.S., Dean of the Faculty of Dental and Oral Surgery (center). Sidney L. Horowitz, D.D.S., Vice Dean (top left). Thomas J. Cangialosi, D.D.S., Associate Dean for Post-Doctoral Education (top right). Ennio Uccellani, D.D.S., Assistant Dean for Clinical Affairs (middle right). Martin J. Davis, D.D.S., Assistant Dean for Student Affairs (bottom right). Jay Wexler, Associate Dean for Administrative Affairs (bottom left). Norman Kahn, D.D.S., Ph. D. Associate Dean for Academic Affairs (middle left).

Look To Your Right, Look To Your Left . . .

As many of our college friends joined the rat race, we went back to lecture halls and laboratories. Sometimes you felt as though you were back in high school as they called your name for attendance. But nothing made us more different than our working friends, shocked us more or made us more nervous than ANATOMY.

As we broke off into groups of five or so and stood by the body assigned to us I'm sure I had an out-of-body experience. I heard nothing as my eyes fixed on the outline of the cadaver draped in sheets and plastic. The smell of the preservative made my eyes water and stung my sinuses with every breath I took. I could have left the room but there was a morbid curiosity that I think we all felt. I wanted to see a dead person. I wanted to be sure they were really dead. It was a look into the future. I mean nobody escapes death, but I felt so alive at the time I couldn't possibly end up this way. Shouldn't I be trying to have as much fun as possible NOW?

I stared at my cadaver for a while just waiting for it to move so I could say "AHA!" But it never flinched and the days and weeks of the semester moved on and the cadavers became very personal although less "human." I think what made them human left when they died, but lives on in the memories of those who knew them. I'm sorry I never knew the person who was my best teacher.

FRESHMAN YEAR DR. STEVEN DOTY

We will best remember Dr. Steven Doty for guiding us through one of the most difficult courses of our first year: CBTO. Dr. Doty seemed to have a special interest in the success of the Dental students which he demonstrated in his lectures and lab seminars.

Thank you Dr. Doty for your knowledge, patience and great smile on those long Friday afternoons of first year.

IT ALL BEGAN AUGUST 18, 1986 WITH ...

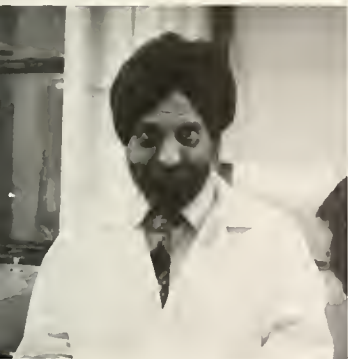

Gross anatomy was intended to provide all future physicians, whatever their eventual fields of specialization, with the opportunity to teach themselves the basic knowledge of the structure and function of the body, a subject matter that has been taught, with ever increasing refinement and accuracy, for the past 2500 years.

Dr. Ernest April, Assoc. Course Director

Dr. Melvin Moss, Course Director

Dr. Singh

Dr. Pham

Dr. Colacino

Mr. Rogers

Dr. Noback

Dr. Ambron

Dr. Allen Gold, Course Director

Biochemistry 101 was designed to give you a working knowledge of the chemical processes of the human organism and how some of these are involved in disease. The faculty welcomed you and hoped that you would take advantage of the opportunities provided for discussion and individual help.

Dr. Alvin Krasna

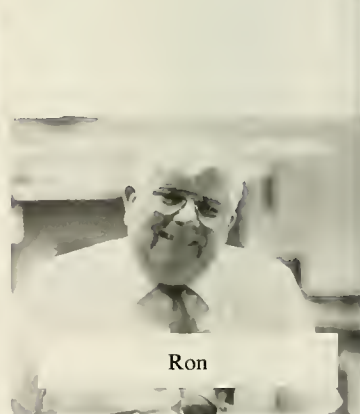

Dr. Shrinivasin

Dr. Eladio Nunez, Course Director

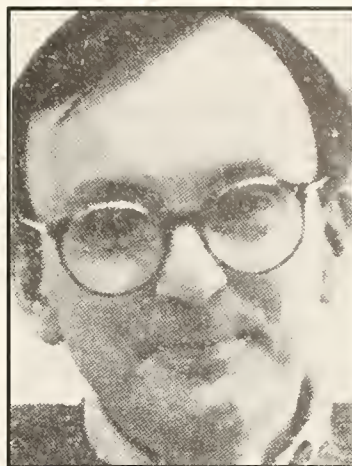

Dr. Michael Gershon

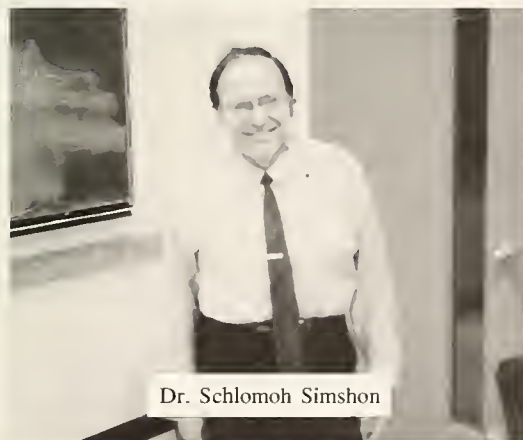

Ron

Cell Biology of Tissues and Organs considered the structural and functional relationship of various cells, tissues and organs based on one simple concept: "All of the tissues and organs of the body are composed of cells and the extracellular products of cells-the matrix." This, then lead to the study of the application of these elements and their relations within the body tissues and organ systems at both the macro- and microscopic levels.

Microbiology was a basic course that was taught in three sections; Immunology, Bacteriology and Virology. We attempted to interrelate these disciplines by examining in detail, the genetic basics for the pathogenicity of microbial infections. Accordingly, the course discussed cellular and humoral immunity, bacterial physiology, genetics and pathogenesis and mechanisms of viral replication and disease.

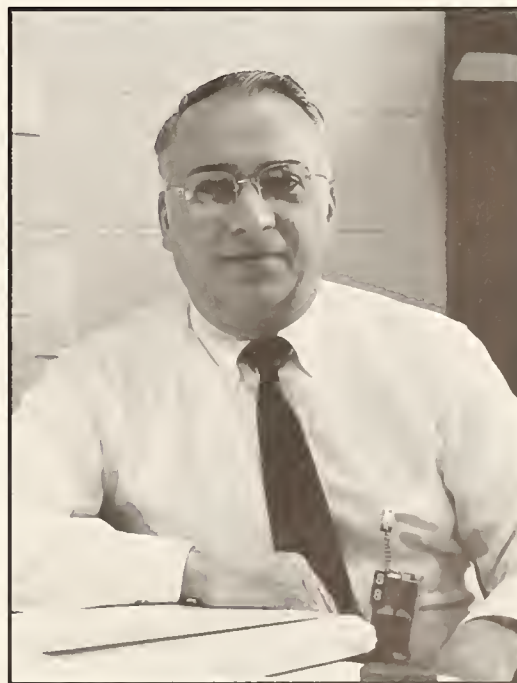

Dr. Charles Young

Dr. Schlomoh Simshon

The central objectives of the course were to assist the students to achieve an understanding of: (1) the functions of specific cells, tissues and organs and the physical and chemical processes which underline these functions, (2) the neural, humoral and local reflexes which coordinate the homeostatic adjustments to perturbations in the external and internal environments, and (3) the need to evaluate the scientific data which underlie our understanding of these processes.

Dr. Mero Nocenti

Dr. Ann Judith Silverman

The Course was designed to present an overview of human embryology and development which coincides with the organ systems studied in Gross Anatomy and Cell Biology of Tissues and Organs. Emphasis was on early embryogenesis and its mechanisms and on development of the nervous, cardiovascular and urogenital systems.

Dr. Myron Winick

Undernutrition can lead to serious deficiencies; overnutrition to disease such as atherosclerosis, hypertension, obesity and even cancer. Nutritional requirements change throughout life and during certain disease states special diets are needed. For health care professionals, a sound knowledge of nutrition will help keep their patients healthy and will aid in treating many illnesses.

Dental Anatomy and Occlusion included lectures and laboratory sessions in oral anatomy, dental morphology and dental occlusion.

This Can't Be Happening.

The novelty of the first year is long gone and still I haven't looked into anyone's mouth except my own. Each day ahead promises to be filled with more lectures and slides than an average NATO meeting. During that year we took about 16 courses, seventy exams and 1,000 quizzes. Of course I still had my parents to remind me, "You wanted it" or "It will be worth it some day."

The pressures of second year had a way of exaggerating people's personalities. This was great if they had a good one. However, if not, it was murder to be near some of our treasured classmates around exam time (which was most of the time). I can't remember much that year except how slowly it crawled by and how my parents smiled at me at the end and said "that really went fast, didn't it?"

Well, maybe for them, I guess it did!

SOPHOMORE YEAR RICHARD LICHTENTHAL, D.D.S.

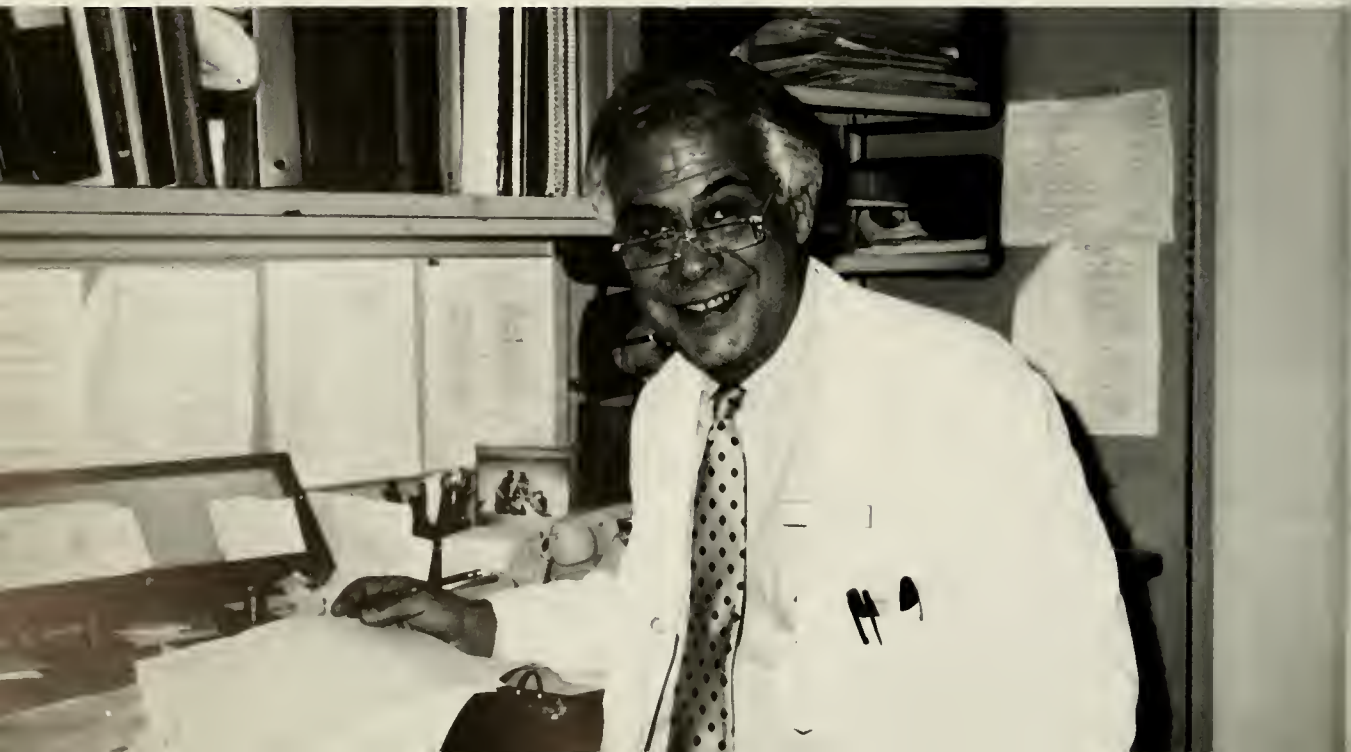

We began our Sophomore year eagerly but anxiously. Yes, we had made it past our first year; however, the awful reputation of sophomore year hung over our heads and taunted us. Through this dark cloud however did shine the warm sincere smile (and tan!) of Dr. Richard Lichtenthal.

We first met Dr. Lichtenthal in preclinical operative dentistry. At a time when class I cavity preps were a major issue, Dr. Lichtenthal had the patience to show us how and guide us even if it meant holding our hands.

His concern for us did not stop at a cavity prep in sophomore year. He watched for our development in clinic and as future dentists. He frequently checked our operative cards, got us clinic patients and board lesions. He gave many of us the push we needed. "I know you can do it, that's why we picked you!". When the chips seemed low you could always count on Dr. Lichtenthal's advice to be the honest, yet not caustic; encouraging but not misleading.

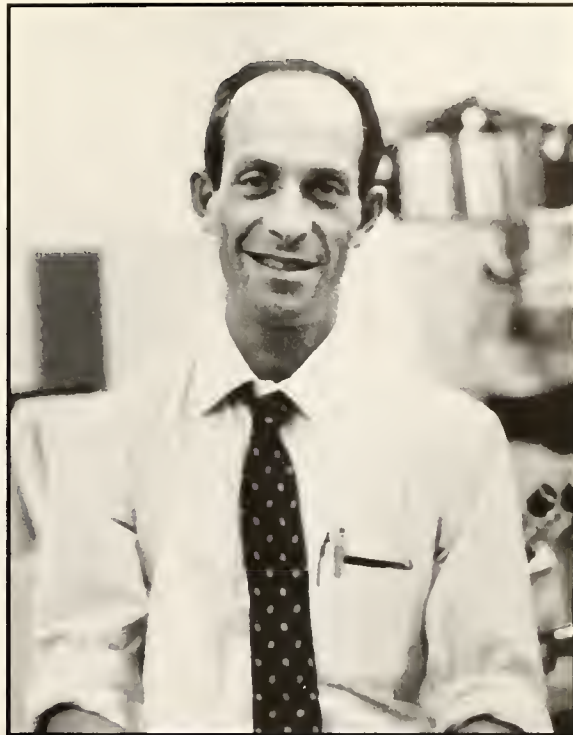

Dr. Lichtenthal should be recognized as a excellent teacher, a friendly individual and a true leader: for these reasons among many others we congratulate him on his appointment to Chairman of the Department of Operative Dentistry!

We're gonna miss ya!
Class of 1990

IT ALL BEGAN AUGUST 24, 1987 WITH ...

Pathology, the study of disease, began by examining the principles of general pathology, particularly the characteristics of and pathways leading to cell and tissue changes in inflammation repair and neoplasia. In systemic pathology we examined in detail the pathogenesis, gross and microscopic morphology and complications of disease of the heart, lungs nervous system, kidneys, gastrointestinal tract and much more. Correlations with clinical medicine and physiologic principles were stressed throughout the course.

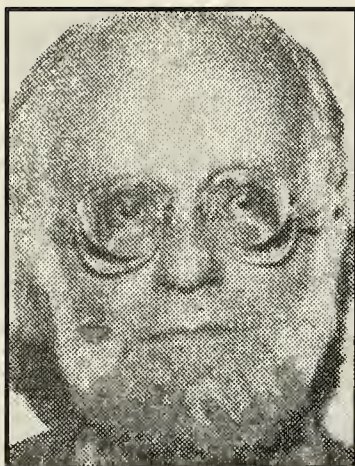

Dr. Jay Lefkowitz
Course Director

Dr. John Fenoglio, Jr.
In memory who died August 1989

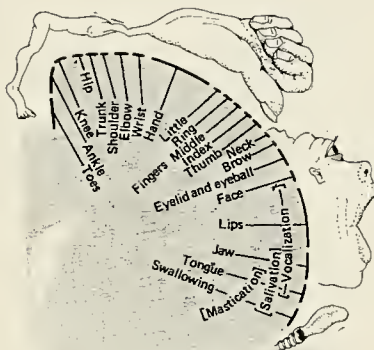

Mildred Shemish
Administrator Coordinator

Dr. Irving Kupfermann
Course Director

The overall emphasis of the course was on recent attempts to apply cell and molecular biological techniques to the study of the nervous system, its development, and its control of behavior. We also described those neurological and behavioral disorders that are both instructive scientifically and important clinically.

Dr. Andrew Wit
Course Director

Pharmacology taught the basic principles of the science while also preparing students with the vocabulary and information required in the clinical years as well as for future practice. It was a demanding course from which we learned a great deal about drugs and the criteria for evaluating those which will be introduced in the future.

DRUGS REQUIRED FOR EXAMS (partial list)

Sympathetic drugs:

epinephrine
norepinephrine
isoproterenol
dopamine
tyramine
amphetamine
ephedrine
phenylephrine
terbutaline
albuterol
phenoxylbenzamine
phenolamine
prazosin
yohimbine
timolol
clonidine
methyldopa
reserpine
guanethidine
cocaine
imipramine
ouabain (digitalis glycoside)

] As noted in syllabus
] for
sympathetic lectures

The dental and oral tissues are the substrate of dental practice. For the successful dental professional a detailed knowledge of their development, structure and function are essential.

The principal objective of the course Oral Microscopic Anatomy and Embryology was the acquisition of this knowledge through lectures, laboratories, demonstrations and conferences. Immediate clinical applications were stressed when appropriate. At the completion of this course, the student was able not only to apply this knowledge in the clinical setting, but equally importantly, expand on it by reading the professional literature knowledgeably.

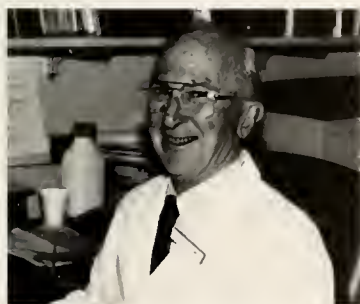

Dr. Letty Moss-Salentijn
Course Director

Class 1990 - Hard at work

Dr. Letty Moss-Salentijn

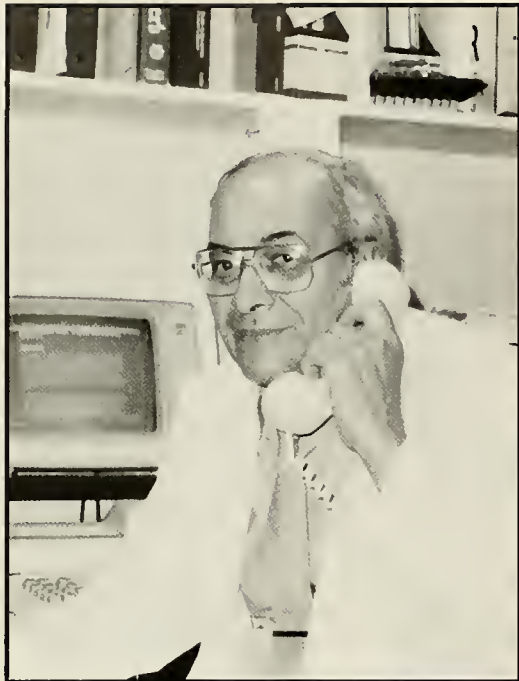

Dr. Sidney Horowitz

Dr. Marlene Klyvert

Dr. Melvin L. Moss

Dr. David Kaplan
Course Director

Dental Auxiliary Utilization consisted of lectures and clinical experience in four-handed, seated dental service delivery; effective utilization of chairside dental assistants; patient and dental team positioning; sequential instrumentation; equipment and space criteria. Coordination of auxiliary utilization techniques with the overall operation of dental facilities; includes an overview of the role of computers in dentistry. (Well so much for computers!)

Tawana, Ethelda, Dorinda

"good use of indirect vision"

Lectures emphasized organization and financing of health care. Overview of public and private sectors of dental care, with emphasis on third-party insurance, group practice models, peer review and PSRO, manpower, legislation, and projected programs.

Dr. Ardele Wilson

In Introduction to the Patient, small group seminars were designed to help students develop the knowledge, skills, and personal qualities necessary for effective interpersonal communication.

Dr. Lynn Tepper

Lectures included the etiology, histopathology, measurement, and prevention of the plaque disease (caries and periodontal) with emphasis on preventive techniques for improving host resistance.

Dr. Irwin Mandel

This laboratory course consisted of exercises on the fundamentals of operative dentistry, including the etiology of dental caries and the biological approach to the technical procedures in the restoration of teeth. Periods of clinical observation were an integral part of the course.

Dr. Stan Brzustowicz
Course Director

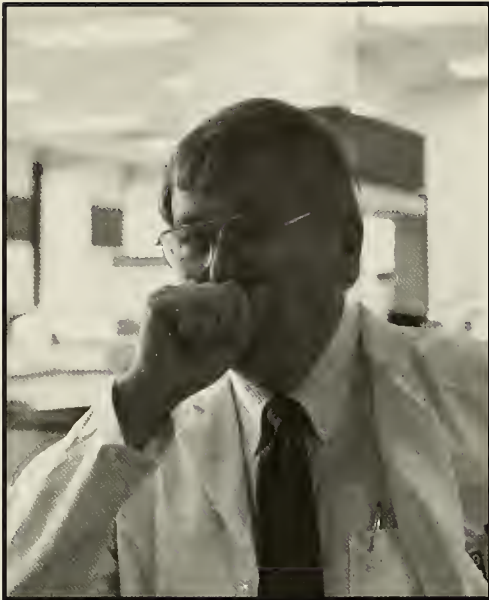

Dr. Steven Scrivani Sr.

Drs. Daniel O'Connell, Kenneth Lee, Thomas Kilgannon

Above left: Dr. Frank Pandolfo, Above right: Dr. Stanislaw Brzustowicz with class of 1990 in pre-clinical Operative Dentistry. Left: Drs. Stanislaw Brzustowicz, Richard Lichtenthal and Edward Cain, Jr.

Dr. James W. Schweiger

Pre-clinical prosthodontics included lectures, demonstrations, and audiovisual aids on the theory and procedures in the design and fabrication of fixed, removable, and complete prosthesis. In preparation for the clinical performance of prosthodontics, as many procedures as possible were simulated by the students on models in the laboratory.

Dr. Constance Phillips

Drs. Sanford Salz and Joseph Delisi

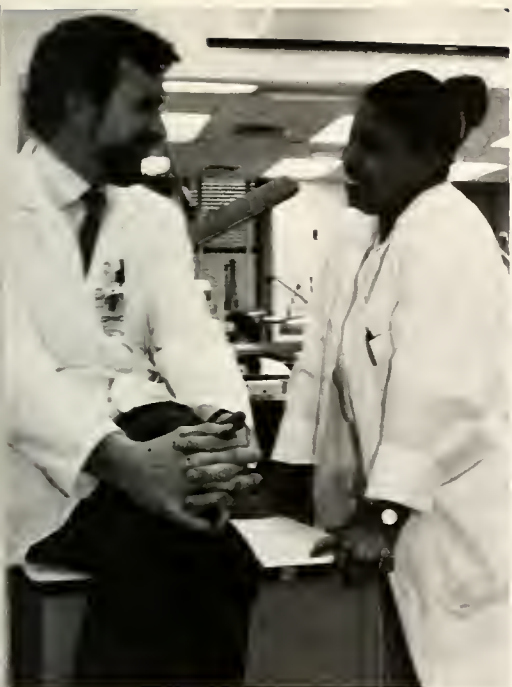

Dr. Sheldon Abbott

Dr. Robert Wright

Dr. Joseph Delisi

Drs. Udo Shutte and Constance Phillips

Dr. James Murphy

Drs. Joseph Delisi, Sanford Salz and Robert Wright

It is my pleasure to be able to write this short (final) note to the Class of 1990 at this exciting time of your lives. You have chosen a profession where you will be serving others - a noble ideal indeed. My remarks are meant in a positive way and will only be appreciated by you in the years to come when you look back on your academic careers at Columbia. You were at a stage in your life when you were like young, undisciplined bulls impatiently chomping at the bit to get on with your lives. Thus you were not really happy that Columbia took you firmly in hand and developed you into people with high professional standards. Yes, even though you did not always like it, you were molded into a professional, well armed with the skills to render a service to your fellow mankind. You will qualify shortly at the School of Dental and Oral Surgery, and will have mastered the basic blocks of the Science. How you mold your lives from this point on depends on yourself and how you use the tools of service, job satisfaction, health and happiness. Please feel free to contact me in the future if you have any problems where you feel I can be of assistance. May you soon all have full appointment books. Best of luck.

Dr. Neill Serman
Chairman of Division of Diagnostic Services

Jose Padilla, Mildred Jenkins, Marie Sansone

Dr. Louis Ghisalberti

Dr. Zeikner

Second year Periodontics included lectures and seminars on the diagnosis, etiology, and treatment of periodontal disease, application of basic biologic sciences to the pathogenesis and treatment of periodontal diseases, clinical practices in examination and documentation of clinical findings in the periodontal patient; prophylaxis, subgingival scaling and root planing; teaching and motivating patients to perform personal hygiene. (The first time we saw patients!)

Dr. Murray Schwartz

Dr. Paul Kamen

Marlene Sanchez and Dr. Robert Gottsegen

Dr. Susan Karabin

Dr. Daniel Fine

Preventative Dentistry dealt with the introduction to the clinical setting, techniques of asepsis and infection control, patient/operator positioning and technical use of a dental mirror and explorer. Students also gained clinical experience in performing gingival and oral hygiene indices and applying topical fluoride and pit and fissures sealants.

Dr. Julie Yip

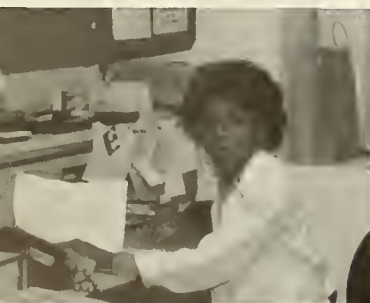

Dr. Gary Cohn and Ms. Sherry
Gateman

Dr. Carlos Mendieta

Dr. Lawrence Spindel

Dr. Marlene Klyvert

Dr. Camille DiPaola

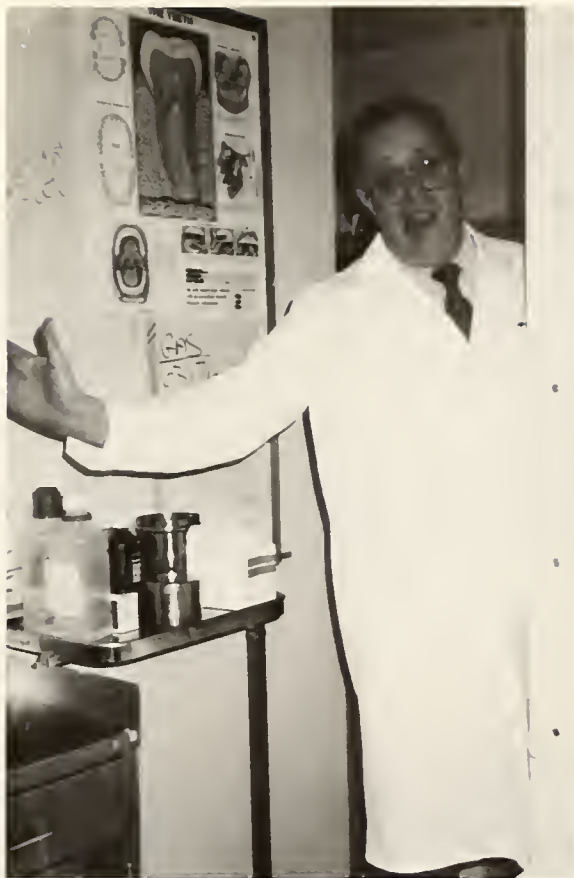

Dr. Georgina Zabos

Dr. Lee Adamo

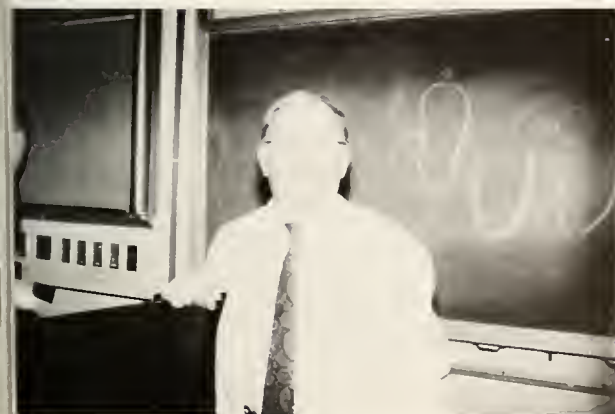

Dr. Louis Mandel, left

Poster boy for the Salivary Gland Clinic

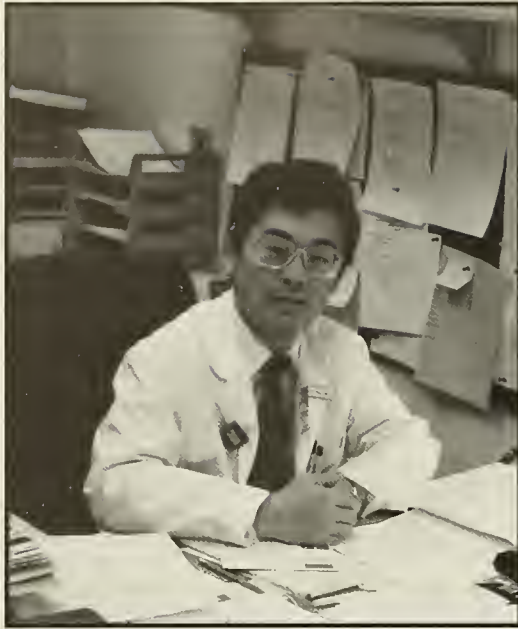

Dr. Harold Baurmash

"What do you want now?"

"Of course it's gonna hurt, I'm pulling your tooth!"

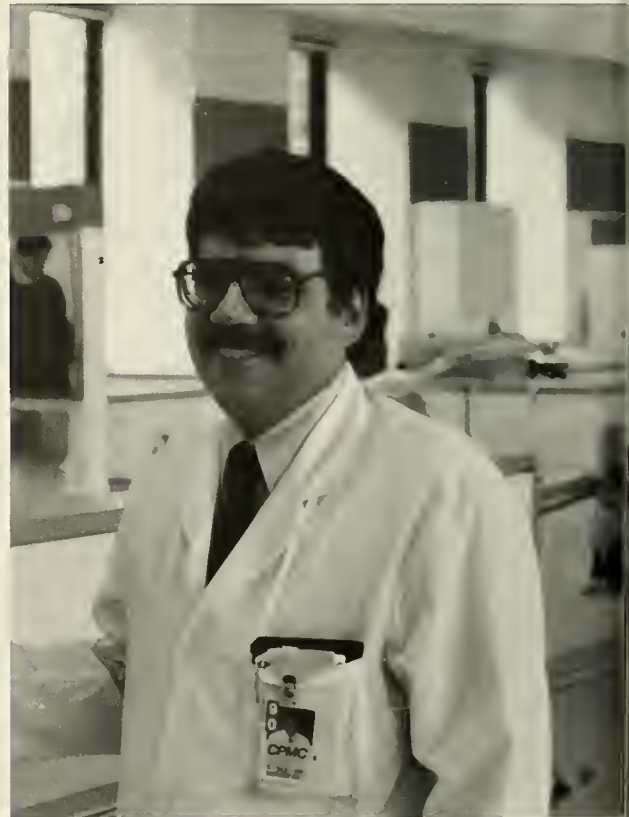

In your profession as a dentist you will often be faced with **ENDODONTIC PROBLEMS** and you will come to appreciate the importance of endodontics even more than in your student years. Can you imagine clinical dentistry without endodontics? In what's known as the restorative triad, i.e. restorative dentistry, periodontics and endodontics, endodontics is responsible for providing the solid foundation on which restorations are built. This foundation must be solid and of the best quality otherwise the restoration will be like the proverbial castle built on quicksand.

What you have learned about endodontics at school are just the basics. As you go through your clinical career consult with your endodontic colleagues and try to learn more about endodontics for yourself, but most importantly for your patients. Let me quote a famous prosthodontist: "Those who do not take endodontics seriously are not good dentists. I can not think of proper mouth rehabilitation without endodontics". My advice to you is this: Be humble, since you still have a lot to learn, be honest, since you are dealing with human health and strive to do your very best.

Dr. Syngcuk Kim, Acting Director

Dr. Bo Gunnar Hasselgren

Dr. Dory Calev

Clockwise: Dr. Jeffrey Senzer; Drs. Priscilla Konecky, Murray Cantor and Joshua Most; Drs. Bruce Schulman and Charles Solomon; Sarah; and Veronica.

Dr. Robert Cederquist, Director

It is the responsibility of every dentist to have knowledge in diagnostic and treatment procedures which will enable him or her to recognize, classify, differentiate, and assess malocclusions accurately. It has been the objective of your course in orthodontics to provide such knowledge. It is our hope that the courses have given you a high level of awareness of the necessity for consulting with specialty colleagues as a means of coordinating total dental health care.

The orthodontic faculty is confident that the judgment, knowledge, and skills you have gained in orthodontic diagnosis and treatment planning will always be used in the best interest of your patients. We all wish you the very best in your future careers!!

Dr. Olivier Nicolay

Dr. Malcolm E. Meistrell, Jr.

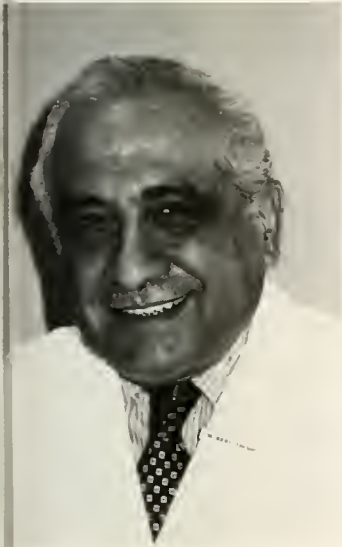

Dr. Stella Efstratiadis

The Division of Orthodontics encourages dental students to participate in divisional research projects. This can be either clinical or laboratory studies. Presently, two students are involved in a clinical study on the effects on orthodontic extraoral force on the palatal plane.

The postdoctoral students are required to be involved in research and are expected to complete an independent research project under the guidance and supervision of faculty. This is part of their graduation requirements. During the past year the following projects have been completed and presented by students:

- Report of bone and soft tissue morphologic changes following molar uprighting procedures.
- Treatment effects of maxillary protraction by concomitant rapid palatal expansion and intraoral elastic force on skeletal Class III.
- Vertical incisor relationship and its association with myofacial problems of the masticatory muscles.
- Orthodontic bonding: A study of two “no mix” adhesives.
- The proportion of maxillary molar crown height to the vertical dimension from occlusal plane to nasal floor. A statistical comparison of this dimension between panoramic and cephalometric radiographic images.

Dr. Julius Tarshis

Drs. Richard Gliedman, Andrew Davis, Monroe Gliedman and Joseph Comizio.

Drs. Marshall B. Fleer and Constance Winslow

Dr. Thomas Cangialosi

¿Habla Inglés?

*W*elcome to the 3rd year. You will be responsible for calling your patients, greeting them (if they show up), sterilizing your instruments and operatory, treating your patients, assisting yourself (a nice trick if you haven't seen it), dismissing your patients, cleaning up and then repeating the cycle ad nauseum.

I wouldn't want to leave the impression that 3rd year was all bad. Coming on the heels of 2nd year, which robbed us of almost all our free time, the 3rd year was just the opposite. Loaded with free time but generously sprinkled with pesky quizzes, it was what we all needed. This was the year that the runners started running again, the partiers partied again (some never really stopped though), and we all moved in our own directions. Some became parents, others got married, and the rest of us were single and loving it.

In the clinic some caught on more quickly than others. Some who did well in the lecture courses turned out to be clinical clods-but they were trainable. We learned more than just oral pathology, prosthetics and operative dentistry. We had to apply these subjects to human beings. We experienced frustration with squirming children, unruly tongues, oceans of saliva and wrestled with a force so great it could only be the rubber dam. Somewhere in most everyone's mind could be heard at one time or another the question "Is this really for me?" But we were already committed and had pressed toward the 4th year which would hold the answer.

JUNIOR YEAR DAVID J. ZEGARELLI, D.D.S.

Memories of Junior Year largely revolved around one class and one man. We were spoon fed information for National Boards and NERBS. The entire Class of 1990 thinks Dr. David Zegarelli deserves more than just a "pat on the back" for the wonderful job he did to prepare us not only for our grueling fourth year exams, but for our entire future as clinicians.

You were there every morning prepared with carousels of slides, detailed handouts, and of course, how could we forget . . . your course syllabus with its 336 microscopic kodachromes compiled into microfiche cards. The Class of 1990 voted Dr. David Zegarelli into the category of favorites. Thank you for being enthusiastic enough to make Oral Pathology what it was!

DON'T PAT YOURSELF ON THE BACK

Melanotic Neuroectodermal Tumor of Infancy- "If you see just one of these cases in your illustrious careers of 30 years ... that's a lot."

I've seen 6, but that's the type of specialty practice I'm in. In a University setting like this, THEY come to see me."

You have GP's down here ... and they'll refer the cases to the oral surgeons over here ... for a biopsy and then there is me up here ... on top of the pyramid."

With regards to Board questions- "And if you get this question right, don't pat yourself on the back because 9.9999999% of the country will get it right also."

If I say lymphoepithelial cyste ... you say FLOOR OF THE MOUTH."

If I say epidermoid or dermoid cyste ... you say FLOOR OF MOUTH, AT THE MIDLINE, WHERE RIGHT MEETS LEFT."

Have the patient back in 10 days and the lesion will heal itself and you'll look like a hero."

The NERBS are based on 1 grade. If your above 75 you pass, below, you fail. Simple as that!"

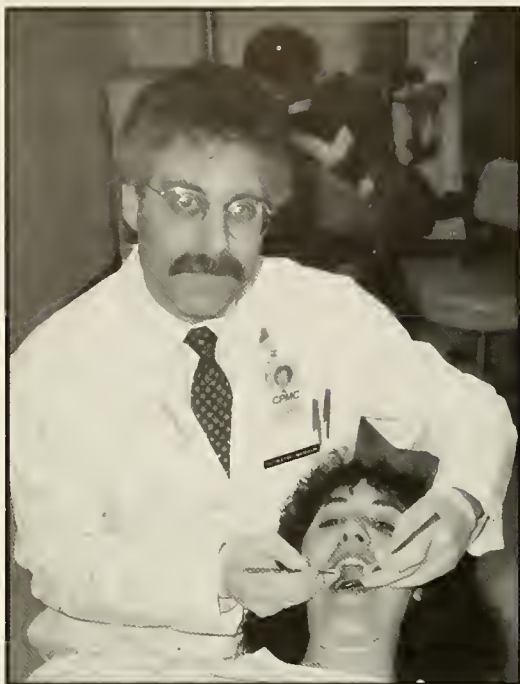

You guys will definitely see Ameloblastoma on the Boards. Although it is the most popular lesion in the literature, this lesion is rare."

Islands of odontogenic epithelium with peripheral palisading of cells and an inner stellate reticulum appearance."

So keep that in mind when you see a radiolucency in the posterior mandible of an 18 year old male."

With regards to a treatment of a Staphylococcal Bone Cyste- "Leave it Alone."

One wart = one papilloma."

Dr. Wayne Maibaum

Drs. Winston Wen-Jong Chen and Peter Zegarelli

Drs. Robert Crowley and Steven Singer

Congratulations to the Class of 1990 upon completion of your undergraduate dental education! As you noticed from your rotations in the Rapid Evaluation Unit (re Oral Diagnosis Clinic), the role of the dental school in serving our patients is changing. This is in response to the changing needs of society and demands made on our profession.

I hope you take with you the message that our profession is a dynamic one that must continually adapt to the changing needs of our patients. Your experiences at Columbia have given you a foundation upon which to build your careers.

Continue to grow and evaluate (rapidly or otherwise) your role as a dentist to better meet the needs of the future. Best of Luck!

Dr. Steven Singer

Dr. David Zegarelli

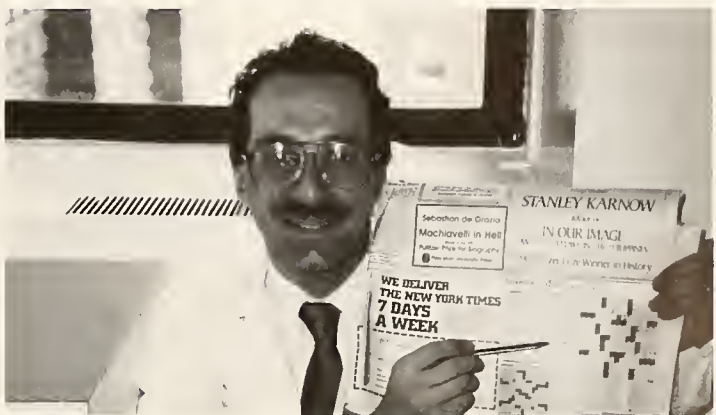

Marlene Poskitt

Drs. Stephen Stambler and Harold Darwin

Drs. Karmioli, Darwin, Schiff and Peter Zegarelli

Dr. Peter Zegarelli

Dr. Richard M. Lichtenhal
Chairman, Division Of Operative Dentistry

The faculty of the Division of Operative Dentistry extend our very best wishes to the Class of 1990.

We have tried to give you a sound foundation in basic Operative Dentistry. Your dental education was a cooperative effort. It worked best when you contributed to it. We hope we have given you the opportunity and encouragement to strive for professional excellence. Your education will neither succeed nor fail simply because of what you did or did not do in school. It will depend, however, on how you use that experience to grow as a professional.

We hope that we have increased your motivation and ability to continue to learn after graduation. Most learning occurs outside of the classroom and we hope you will use the principles learned at Columbia to evaluate, and use ethically, all of the information that will become available in the years ahead.

Most of all, we hope that you will become good people, good husbands and wives, good fathers and mothers, good sons and daughters, and good friends.

We hope that you will not forget us; that you will maintain a relationship with the dental school, and that you will help to make our school grow and prosper.

We wish you prosperity, health and happiness.

The Class of 1990 will be called upon to cope with an expanded array of social issues and scientific advances in the coming decade. You will be confronted with a society that is more knowledgeable about health care and has greater expectations. The Class of 1990 will be the vanguard of a revolution in technology.

As shifting demographics in society at large dictate new approaches to dental care, the profession will be challenged to seek a broader spectrum of treatment modalities. Many of these modalities will have an immediate and salubrious effect on the quality of life of the patient both in terms of physical function and self-esteem.

Prosthodontics constitutes one of the largest and one of the most complex branches of dentistry. This practice specialty requires a delicate synthesis of both anesthetic and medical considerations. From its inception, restorative treatment has played a major role in the practice of dentistry. The advancements in prosthetic principles, concepts and practices as first described by Pierre Fauchard in the 18th Century were the beginning of modern dental prostheses. This began an era that was to see significant advances and innovative treatment from high speed rotary instrumentation for tooth preparation to advances in biomaterials and mechanics. This precipitated the design and fabrication of all types of fixed, removable and maxillofacial prostheses.

The Class of 1990 will be a part of the development of sophisticated techniques which will require them to use their entire repertoire of their theoretical, clinical and scientific skills. It is our hope that the 1990 Graduates of Columbia will meet the challenge and continue both to support and to enhance the meaning of prosthodontics that has been established by their predecessors.

The faculty of the Division of Pediatric Dentistry is pleased to extend congratulations and best wishes to the Class of 1990. We have enjoyed having you with us and are proud to welcome you as our newest professional colleagues.

Just as children are society's hope for the future, you represent our hope for the future of our profession. We have taught you to apply recent technological advances to the practice of dentistry for children, but the science of dentistry is changing very rapidly, and soon what you have learned will be outdated. Keeping current with dental research will be both your responsibility and the key to your success in the future.

We hope you will use the skills you have developed and the knowledge you have attained to provide your child patients with positive dental experience and a high level of oral health. We also hope that you never stop questioning and thinking as we mutually strive to improve oral health for patients of all ages.

Congratulations!

A black and white photograph of a cluttered workbench or drafting table. On the table are various tools including a large T-square, a compass, and a large mechanical device resembling a press or a large compass. A large sheet of paper is propped up in the background.

You Just Had To Be There

The fourth year crept in slowly without much change except a move to the seventh floor, which is really the sixth floor . . . but that's another story. As the weeks (we measured time in weeks now) passed by we had a false feeling that there was plenty of time. For those unfamiliar with the rigors of dental school, there is a Chinese-menu approach to the requirements for graduation. It is also agreed that in and of themselves, these requirements, for which we have two years to complete are not so lofty until you begin subtracting time lost to rotations, electives, and other bothersome obstacles. Let's say we have two clinical years to complete these requirements. This translates roughly into 19 months since the Senior year ends in May and we had a month vacation in Junior year. So 19 months

minus 1 month Radiology (minus more time if you had to retake films lost, misplaced or thrown out by accident)

minus 3 weeks Oral Surgery (No Way Out!)

minus 1 month Oral Diagnosis (minus less time if you treated patients on the sly but double that time if you got caught by Marlene)

minus 6 weeks Externship (actual time lost varies according to individual)

minus 1 month spent searching for stolen, lost, broken or borrowed instruments.

minus 1 month spent waiting for hospital elevators

minus 1 month Wednesday elective

minus 2 months Peds

minus 2 weeks waiting for Gus to decide what to have with his coffee

minus 3 months for redo's

minus 2 weeks searching for charts lost in Oral Surgery

minus 2 months waiting for instructors to figure out 3-down and 5-across

This leaves 1 month actual clinic time to complete junior and senior clinical requirements.

So as we stand at graduation we can be proud of ourselves for having beat the odds and surprising even ourselves. Behind each broad smile that day was a sense of accomplishment so great that for those of you who still don't understand, it can only be said "You just had to be there."

SENIOR YEAR

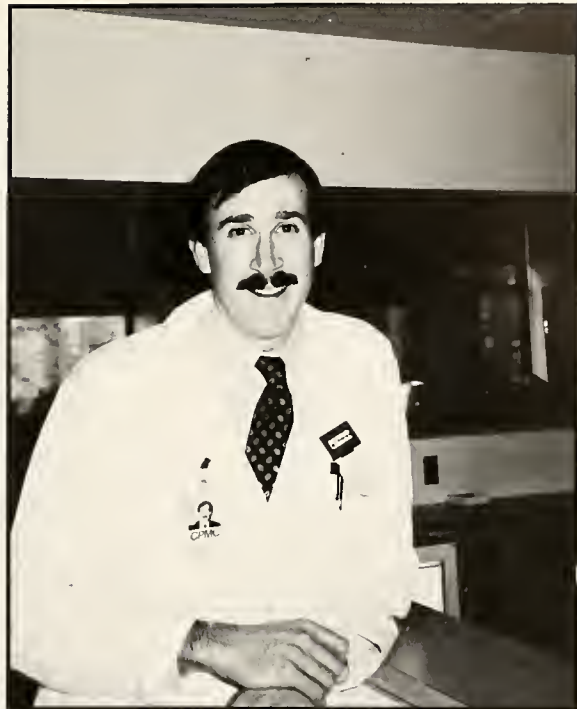

Lucius Battle, D.D.S.

We wish to express the warmest, most sincere THANKS to Dr. Lucius Battle. You gave up lunches stayed late and would always pop down from the 9th floor to make sure we were alright. You always sat by our side until the job was done. Without you, the majority of our class would not have completed our requirements. Without you, we would have floundered. You always knew exactly how to fix things that had gone awry. If we ever needed to find you, we would just look for the crowd of students who constantly surrounded you.

Throughout the year we got to know you quite well. Your patience, understanding, gentleness, and good nature were endless. Your sense of humor and candor were refreshing. We were privileged to hear your words of wisdom not only in regard to prosthodontics but in regard to life as well. We hear about your adventures in speed-boat racing, car racing, motorcycle racing and flying. You are one who truly enjoys life. We hope that some of your personal characteristics have rubbed off on us. Thank you for caring so much!

The diagnosis and treatment of the periodontal disease will change dramatically during the next decade. Basic research in periodontology has for many years examined such issues as the nature of the microorganisms that comprise the subgingival flora, how the various host immune and inflammatory systems react to the microbial change and cell biology of the periodontal tissues. We are entering an era when this research will yield clinically applicable procedures and techniques. Novel antimicrobial strategies are being developed to bring agents in direct contact with the local lesion without the adverse side effects of systemic administration. New antibiotics are being tested for their effect on periodontal infections. Microbial and biochemical diagnosis of different forms of periodontal diseases is currently a reality, and this is one area that will experience enormous growth during the next few years. Lastly, surgical procedures to induce regeneration of lost periodontium are now a reality, and new techniques involving the use of specific growth factors will soon follow. Nevertheless, the appropriate use of these techniques and procedures depends upon our awareness of the clinical signs and symptoms of periodontal disease. A thorough periodontal evaluation should be part of all dental examinations. As patients live longer, and retain their natural dentition for longer periods of time, more teeth will be at risk for development of periodontal disease. The challenge is to utilize and blend both classical and new diagnostic and therapeutic regimes into individual treatment plans for our patients.

PROSTHODONTICS

Dr. Ronnie Myers

The area of dental care for the patient with special needs continues to grow. The percentage of our patient population that is living longer with more medical problems, physical and mental disabilities is increasing. In the Special Dental Service area of hospital dentistry, students are exposed to this patient population. They become involved in evaluation, physical assessment, and the provision of dental care. During this assignment the emphasis is on the coordination of overall health care and its impact on oral health. Revisions of treatment plans for the patients are based on the physical assessment and dental needs.

The staff of Special Dental Services extends congratulations and well wishes for continued success for the Class of 1990!

Dr. Steven Scrivani, Jr.

Dr. Susan Crawford

Drs. Dean Glasser and Marc Michalowicz; Monica, Margaret and Estella.

PRESENTING CLASS OF 1990

GRADUATES

*LILIANA SOFIA AGUDELO,
D.D.S.*

PATRICIA ALVAREZ, D.D.S.

JANE FINAN ARENA, D.D.S.

To all those who made this degree possible for me, my gratitude is inexpressible. To my loving parents who gave me vision and encouragement; to my mother and father-in-law whose love and support is constant; to my brothers and sister who never doubted that this day would come; to my wonderful husband who has given me strength, understanding, inspiration and an abundance of love; and to our precious Peter, who makes all things worthwhile — I dedicate my degree with love and affection.

SHEILA BAHADORI, D.D.S.

TOMAS J. BARRIOS, D.D.S.

To my classmates and friends, TB & RF: Thank you for your support, understanding and caring. It made these years one surprise after another. I wish you all a successful career in Dentistry. Keep in touch!!

THE WEDDING!

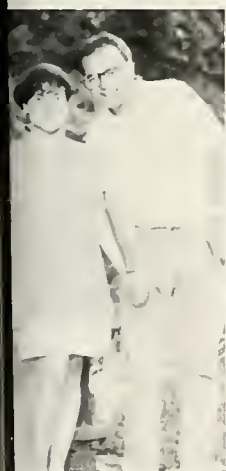

THE HONEYMOON! 16 months later ...

***THE BABY! Who said de
school was boring?***

THOMAS J. BAZDEKIS, D.D.S.

*"We see so far only because we
stand on the shoulders of giants."
Sir Isaac Newton*

CALIOPI BOYIATZIS, D.D.S.

LIONEL ANGELO BULFORD, D.D.S.

Also known to all his friends as B cell, BOO, L.A., Boomonster, Booman on Campus, Angelo Bulfardo, Train, Dr. Choo-Choo, Lionel, Boozers, Moscow PA, Bull and Rocky. We will always remember you as the man with the most nicknames!!

NEIL JOSEPH CAPOLONGO, D.D.S.

Our yearbook would stand incomplete without a description of Neil, our three term class president. Neil will always be remembered by his classmates as a superb leader who united the class and fought for just about anything we asked for and needed. Neil, although a chef at heart, has aspirations of specializing in orthodontics after doing a one year GPR. If you look for Neil after graduation you will find him enjoying his time with his newlywed (ME-Gina) and his one year old puppy-Sammie! Congratulations to the class of 1990.

JESSICA M. CHUNG, D.D.S.

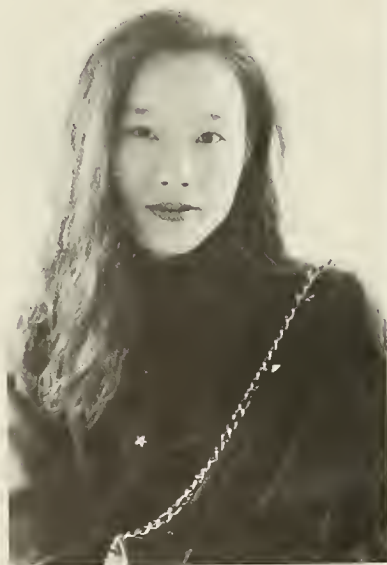

To my dear parents: I would like to thank you for your unrelenting support, understanding and love. From you I derived all my strength.

To my aspiring classmates: Fondest wishes for much happiness and success in all your endeavors.

To the wonderful faculty at SDOS: My heartfelt appreciation for your inspiration and guidance in shaping my growth while in dental school.

*GERALD LOUIS COHEN,
D.D.S.*

*JOSEPH LOUIS COSENTINO,
D.D.S.*

NANCY COSENZA, D.D.S.

*JOHN WILLIAM DeMARINO,
JR., D.D.S.*

*Setauket, New York
High School: Mercersburg Academy
College: Hobart College*

***FREDERICK DONALD
DREHER, JR., D.D.S.***

HOWARD B. EFRON, D.D.S.

SOHEILA POURBOHLOUL- ELAAHI, D.D.S.

Soheila joined Columbia SDOS as an advanced standing student with a D.D.S. degree from National University of Iran and an M.S. degree in Oral Biology from University of Maryland. Most of her time outside clinic is spent on taking care of her family, music, and poetry. Soheila's special care and friendliness always made it easier for the patient to sit in the chair.

GERARD EPELBAUM, M.D., D.D.S.

A Medical Doctor Degree and specialization in stomatology from the Medical University of Paris was not enough. So he came here for a Post Graduate program in periodontics and another D.D.S.

What's next: A practice in periodontics

A special thanks to all my family.

PHILIP L. EPSTEIN, D.D.S.

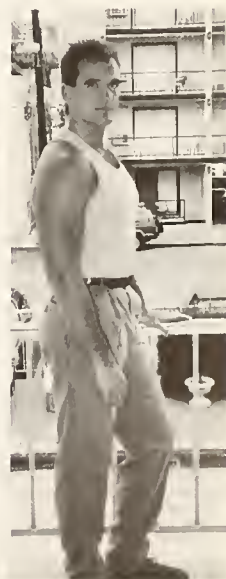

Phil would like to take this opportunity to extend his congratulations to his fellow graduates of the Class of '90, and to wish them all a very happy life and successful career. As a Dentist, Phil will be joining his Dad, Dr. Daniel D. Epstein in their practice. They both are looking forward to working and growing together. Finally, Phil and his wife of one year, Cathy, anticipate a wonderful, fulfilling life of skiing and scuba, family and love. Bon voyage!

RICHARD BRIAN FISHER, D.D.S.

After graduation, Rich plans to enter a General Practice Residency program, hopefully in Westchester County Medical Center. Afterward, he plans to practice in Westchester, NY. His hobbies include bow and rifle hunting, skiing, target shooting, and weight-lifting. Before coming to Columbia SDOS, Rich graduated from Fordham University with a B.S. in Biology in 1986.

**ALLLLLL
RIIIGHTTT!!!**

MARIANNE GABLE, D.D.S.

Gabe,

Fate had thrown us together about four years ago. We had occupied adjacent seats in many classes and clinic sessions by virtue of the fact that we were both born "G's". Little did I know that when I uttered the phrase "Marianne, ya wanna go for a run?" a few years ago, a unique friendship would develop between the two of us. We've been united through emotions of joy, disappointment, anger, confusion, determination and most importantly humor. We've endured more physical pain than most people will ever know. You are a winner by the sole act of placing yourself at the start of a marathon. It conveys to others and yourself the challenges you aspire to conquer. Congratulations Gabe, and remember "If you will it, it is no dream." See ya at the start next year ...

Love always,
Gav

With justification

BETH ANN GAVREN, D.D.S.

Occupation: Student. Birthday: July 25, 1962. Home: Minneapolis, Minnesota. Marital Status: single. Favorite color: black. Fav perfume: Fendi. Fav designers: Calvin Klein, Ralph Lauren & Nike. Fav restaurant: The Monte Carlo, Mpls.. Fav vacation spot: Aspen. Nicknames: Boo Boo, Gav, Scarface, The Shadow, The Untouchables. My theme songs at SDOS: "Still Crazy After All These Years" by Paul Simon, "Delerious" by Prince, "Roll With It" by Steve Winwood. If I could do it over I'd: Do it on the West Coast. The worst time of my life: No Comment. Biggest accomplishment: Getting Gabe to run the NYC Marathon. Words to die by: Drop a box, Beth. Words to live by: Expect a miracle. Aspirations: happiness, health, graduate, successful practice, write a best-selling novel, U.S. Senate seat.

Please someone wake me up!!! This has got to be a bad dream!!!

Excuse me ... I think there's been some mistake. I said the Minneapolis Apple.

Hi. My name is Beth. I'm in the second grade. So these are the wonder years ... See that nerdy looking kid up there? He had a crush on me. I blew him off. I think he now owns IBM.

Hi. My name is Sue. I've known Beth forever. Why are there no men in Minneapolis?

Don't forget to walk the dog.

Gav, I'm glad we got that new parking space in the Towers. Now we'll have a place for the new Mercedes. Yeah Gabe, that's nice I was kinda hoping for a Porsche ...

SANDRA GARCIA, D.D.S.

***JEFFREY ANTHONY GEE,
D.D.S.***

NANCY ANNE GNIZAK, M.S., D.D.S.

Nancy graduated from University of Maryland in 1984 and then received her Master's in Nutrition from Columbia University in 1985. After one year of research at Johns Hopkins University she entered our favorite dental school. Future plans are in the works. Nancy's hobbies include socializing, anything to do with horses, skiing, classical ballet and most importantly, aerobics ... which helped keep her sane while in dental school. Her activities at SDOS included being Editor of both the Alumni Newsletter and the 1990 Dental Columbian. She wishes to thank whole-heartedly the most wonderful parents, sister and brother in the world and her wonderful friends, Rosalie, Suzanne, and Sheila. Nancy would also like to thank the SDOS Class of 1990 for contributing to yearbook. Lastly, Nancy would like to extend her sincere thanks to the SDOS faculty for their compassion and support.

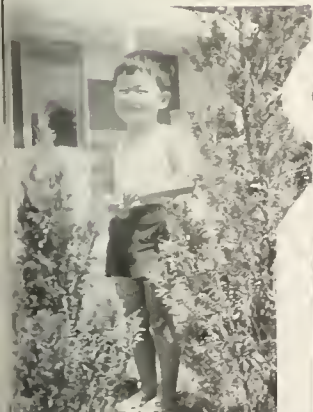

*"Always view people as you do fine art
... in the best light."*

JUNSUNG HA, D.D.S.

ROSALIE IAFRATE, D.D.S.

***WOOHYUN VERONICA JANG,
D.D.S.***

***PETER W. JANKOWSKI,
D.D.S.***

ZVI KAHANE, D.D.S.

March 29th of his freshman year was an exciting day for Zvi for two reasons: The Gross Anatomy practical final was 48 hours old and it was his wedding day. Zvi's wife, Deena, attended some of the few freshman lectures that he went to (maybe even more than he attended). Junior year began with the birth of his daughter, Ayelet Rachel. When Ayelet was 6 weeks old she attended the N.Y. Dental Convention and there began her Muppet toothbrush collection. Zvi is now taking the prosthetic elective. His future plans include a GPR and then General Practice.

***NANCY KARGER-AHARON,
D.D.S.***

*MUNA NASREEN KHAN,
D.D.S., M.P.H.*

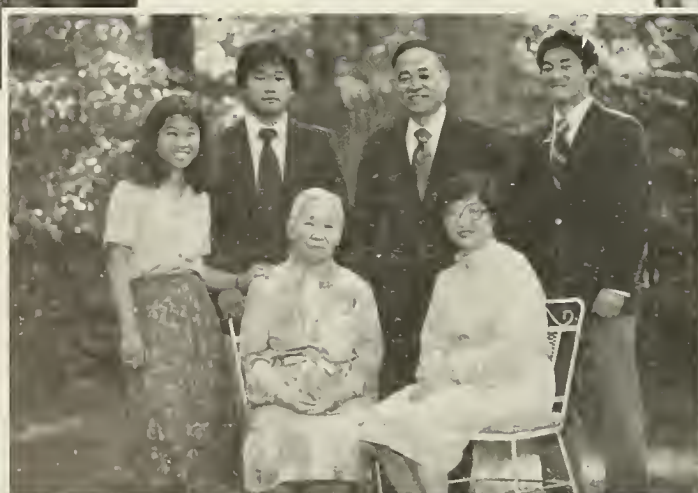

SUZANNE HYUN KIM, M.S., D.D.S.

Thanks Mom, Dad, Tommy, Georgie, and Donna for all the love, support and encouragement that you gave me at Vassar and during my Master's program in Nutrition and Dental training at Columbia. To the Class of 1990 and close friends (Wa, Gnizar, Rosalita), BEST OF LUCK in the future and THANKS!! for some very special memories.

ROMANS 8:28 — All good things come to those who wait.

Quietly, but effectively :... Oh well!

BARBARA F. KIMMEL, D.D.S.

***KENNETH MICHAEL LACKS,
D.D.S.***

LESTER ANDRÉ LeBLANC, D.D.S.

Les, the Cajun from the heart of bayou country down in the depths of Louisiana, added some spicy flavor to our class. The boy will always be remembered for his unique sense of humor and for his incredible drive to finish requirements by Christmas-time. Outside of school, Les could always be found with his lovely bride, Maureen, whom he married just a week after the first-year physiology final. Together, they enjoy long walks along the beach, sailing on their catamaran, camping in the wilderness, snow-skiing down mountains, and simply being together. Les aspires to perform research and teach dentistry on a part-time basis, while maintaining a private practice limited to orthodontics.

Cheers, here's to finding 15 inlays before graduation and to all those wild-n-crazy times at Columbia. On the one hand, I'm glad we're graduating, but on the other hand, I know I'll miss you all. Good luck! May all your dreams come true!

Behind every great man is a totally awesome woman!!!

Keeping an open mind about new techniques for conquering mountains or mole hills!!

It's smooth sailing from here ...

... or is it?

JOHN S. LEE, D.D.S.

SUK KI LEE, D.D.S.

ELIZABETH LINDER, D.D.S.

***PAUL WASHINGTON LINDO,
D.D.S.***

"The Name Says It All, His Style Manifests It All."

GINA LODOLINI, D.D.S.

With a name like Gina Lodolini it was no wonder that Gina became known to her closest friends as "G" and Lodo. Gina has also had the exclusive privilege of being crowned the "Pedo Queen" having discovered her pedo niche at SDOS within this past year. But most importantly, she has discovered that Neil Capolongo soon to be the "Ortho King" shall join her in that great adventure we call life. A match truly made in heaven. Here's to you Gina and Neil, may you have a long and prosperous reign. And remember always stock the castle with Haagen Dazs!!!

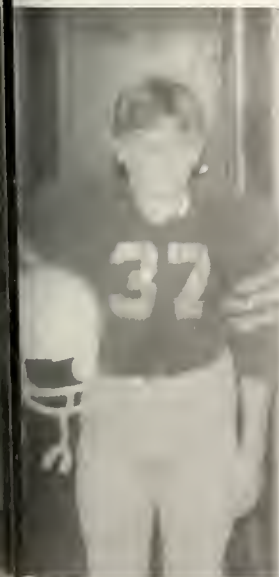

ALBERT MAGALIO, D.D.S.

All Happiness In Life

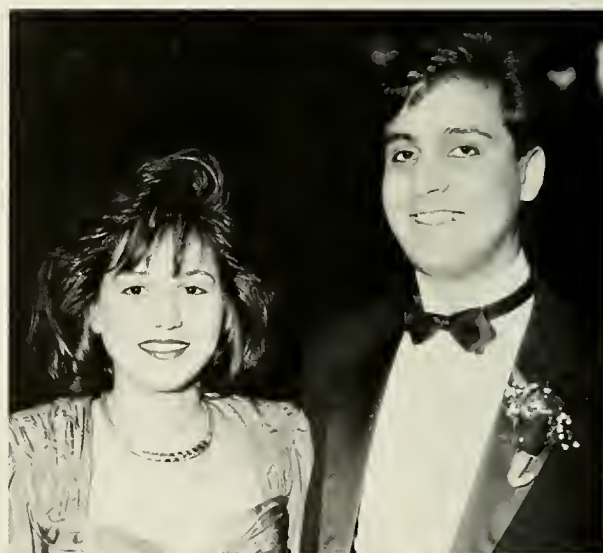

Begins In The Home

AZITA NAGHAVI, D.D.S.

The warmth and support of my loved ones, my family and fiance, made these years a beautiful part of my life, memories which I will cherish forever.

DEVIN JOSEPH OKAY, D.D.S.

VICTOR ARTHUR PARDI, D.D.S.

A life is made up of a great number of small incidents and a small number of great ones.

ROALD DAHL

"We are just the same underneath the shadows of the sun and we are just the same, no more no less than anyone ..."

ANN LENNOX, DAVID STEWART

*BOGDAN MICHAEL
PAUNOVIC, D.D.S.*

JOHN E. PURPURA, D.D.S.

"... And what a long strange trip it's been."

Thanks, Santa!

So . . . This is fourth year. . . .

Man's best friends

SHERIF SAMI RADWAN, B.D.S., D.D.S.

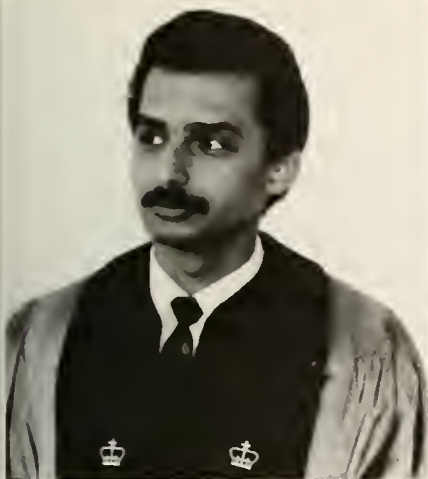

Who did we run to when our patients needed root canal filling of a tortuous root — Sherif! Sherif joined our class in 1988 with a dental degree which he successfully completed in Egypt in 1982. Sherif will be best remembered driving 90 mph on a 30 mph drive, cutting up a rug with many of the ladies and enjoying life to its fullest with good friends and Tequilla. Best Wishes to All!

ALAN ROTHSTEIN, D.D.S.

To sum Alan up in one paragraph is a difficult task. He is witty and charming and the best friend anyone could ever ask for. A true Pisces: he is sincere and caring; lucky are the patients who step into his office. His interests include travel, basketball, and Star Trek but the day is just not complete without a dose of the NY Times crossword puzzle (including Sunday which he usually finishes).

*MAGDY PHILLIPPE SAAD,
D.D.S.*

YIN-YIN SHANG, D.D.S.

Millions of thanks to my parents, sisters, husband, all of SDOS staff and patients. Without their love, support and guidance, this senior page would not belong to me.

With Husband Henry

Mom and Dad

***STACY ILYSE SOBEL
WEEDON, D.D.S.***

AMR M. SOLIMAN, D.D.S.

IMMI SONG, D.D.S.

ELLIOTT MICHAEL WEIDMAN, D.D.S.

Elliott graduated from the University of Toronto with a B.Sc. in Microbiology. His claim to fame is that he waited until the first week of dental school to get married and took his new wife, Anita, for a four-year "honeymoon" on Haven Avenue. Upon graduation, Elliott plans to specialize in Periodontics and eventually do research and teach.

Anita, Thanks For Being There: We Made It!!

DWIGHT E. WILLIAMS, D.D.S., M.P.H.

Dwight E. Williams was born in Manchester, Jamaica on November 4, 1963. He attended Jamaica College and Campion College in Kingston, Jamaica. Between 1982-1986, he attended Boston University from which he graduated with Honors (Cum Laude). His hobbies are table tennis, soccer and he loves listening to Reggae music. Dwight plans to do a General Practice Residency and eventually wants to return to Jamaica to set up a practice.

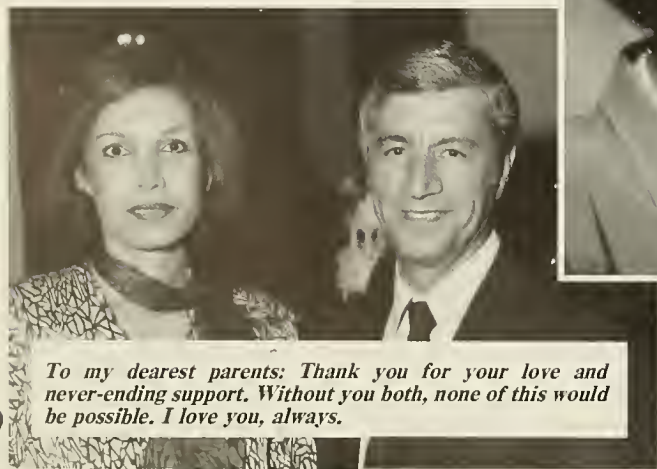

The Future Dentist!

SHIRIN YASREBI, D.D.S.

Shirin, pronounced Shereen, a Floridian since eight years of age was born in New York. She graduated from the University of Miami in 1986 with a B.S. in Biology. Shirin, a nationally top-ranked tennis player, gave up a life in professional tennis for Dentistry. Upon graduation from Columbia SDOS, Shirin plans to pursue a career in Pediatric Dentistry and return to Central Florida. She will always be remembered for her energetic smile, her greeting "hey!" and her bucket of tennis balls.

To my dearest parents: Thank you for your love and never-ending support. Without you both, none of this would be possible. I love you, always.

***CLIFFORD ZDANOWICZ, JR.,

The Center for Clinical Research in Dentistry is now a flourishing enterprise involved in a variety of laboratory and clinically-related studies that include the evaluation of products for people with xerostomia, new oral hygiene devices and effects of Xylitol on plaque and gingivitis (Drs. L. Steinberg, A. Zadarian and F. Odusola and Ms. Irene Mundo, Research Hygienist). Also, the development of new tests for periodontal disease activity (Drs. Vratsanos and D. Fine) and studies on saliva in people with HIV infection (Dr. I. Mandel) are currently being conducted. In addition, Dr. R. Stevens is studying the presence and distribution of viral genes (bacteriophage) in a microorganism associated with destructive forms of periodontal disease and determining the impact on pathogenicity.

Dr. Syngcuk Kim, right

Members of the Laboratory of Oral Physiology in the division of Endodontics are engaged in research dealing with microcirculatory and sensory, or pain physiology of the dental pulp. The permanent research team includes S. Kim, M. Liu, J. Dorscher-Kim and K. Markowitz. In addition, the Laboratory is host to many foreign scholars, who typically spend a number of months at Columbia University and during the summer dental students are also involved in the laboratory activities. The most recent project is the study of the effects of CO₂ laser on the pulp circulation using laser Doppler flowmetry. Results on this in vivo experiment will provide a basis for the usability of the CO₂ laser in clinical dentistry from the point of view of the dental pulp. The main thrust of the Laboratory activity is to understand the biological mechanism of pulpal inflammation with the aim of developing new treatment methods for pulpal disorders.

The Eta Chapter of the Alpha Omega International Dental Fraternity at Columbia University is dedicated to the tenets of professionalism and fraternalism. Our chapter, one of 125 chapters throughout the world, has had a most active and exciting year. This year the fraternity has sponsored a variety of activities including a "Farewell to Koch" Wine and Cheese party, a visit to Madison Square Garden to see the New York Knicks beat the Golden State Warriors, a presentation by Proctor and Gamble on the "Chemotherapeutic Agents in Gingivitis and Oral Health," and our annual induction dinner held in Brooklyn.

WOMEN DENTISTS

C.U.W.D. was established ten years ago as a non-political adjunct to the American Association of Women Dentists (AAWD). Our goals include:

- 1) Integration between members of the four dental school classes at Columbia University School of Dental and Oral Surgery.
- 2) Interaction of the faculty, alumni, residents and students outside the classroom environment.

President: Suzanne Kim

THE WILLIAM JARVIE SOCIETY

The William Jarvie Society is a student run research and honor society with a long standing tradition at Columbia University to promote and foster a spirit of research. Students must show hard work and much commitment to fulfill the requirements placed on them to become a full member. Membership is granted only to those students who are in good academic standing as determined by a committee of faculty members. They must also either present research at Birnberg Day or submit an article for publication in the *Journal of the William Jarvie Society*. The Society encourages all students to participate in its meetings and to apply for membership.

The Gamma Lambda chapter of Psi-Omega Fraternity was very busy during 1986-1990. Each academic year the chapter went to Atlantic City for Election Day. We had annual Fall and Spring dinners with Psi-Omega Alumni. The Spring dinners featured the senior skits portraying the clinical instructors. Other activities included a Broadway show, barbecues, ski trips, golf outings and a Halloween party. The chapter wishes all the seniors lots of happiness and success. We hope our Alumni stay in touch.

COLUMBIA DENTAL

The 1989-90 Student Council was dedicated to getting everyone involved. This was accomplished through a variety of activities such as our weekly (Wed.) attitude adjustments, Fall, Winter, and Spring Bashes; Holiday Party and Fall Picnic. Representatives were sent all over the country to ASDA and ADA meetings. And if that didn't get everyone, the student lounge was renovated. 1989-90 was a great year! Best wishes to the Class of 1990!

BEAUTY GOES TO WORK

The A-dec Priority® Chair is essentially a precision instrument. Built to work and last a career, it's also designed for easy, convenient operation. With features such as one-touch pre-set positioning (doctor adjustable), a choice of three different upholstery packages, and quiet hydraulic operation.

But there's more, much more. In fact, too much to cover here. For the full story, see your authorized A-dec dealer and ask for your complimentary Priority brochure.

If you prefer, call or write us at A-dec for your brochure. Either way, you'll soon discover the many ways that beauty can work for you.

Dear Doctors,

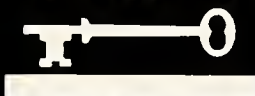

On behalf of our 14,000 member dentists throughout New York State who comprise one of the largest and most active professional networks in the nation, we extend congratulations and best wishes for your future happiness and success.

The following are just several of the many valuable programs and services which are available to members of The Dental Society of the State of New York:

- * Associateship Program for New Dentists
- * Group Insurance
- * Consultation Service
- * Patient Referral
- * Computer Services
- * Continuing Education
- * Relief and Disaster Funds
- * Collection Service

During your years of active practice, whether you need some or all of these services, it's good to know they're there. For Member Services and Information call 212/986-3937 (outside the 212 area code call toll free 800-522-5638, or write The Dental Society of the State of New York at 30 E. 42nd Street, New York, N.Y. 10017.

Gold Key Member

The Key to Your Future Success in Dentistry...

... could very well be a membership in Healthco's exclusive *Gold Key Card* program. It will open doors for you as you set forth in your career in dentistry.

Healthco offers a wide range of unique Gold Key services that can help you now and in the future—whether you are considering your own practice, an associateship, a partnership, government service, graduate study or other options.

Get your personal Healthco *Gold Key Card*. Find out how to take advantage of all Gold Key benefits. Contact your local Healthco branch or call Carl Robinson at 1-800-225-2360.

Congratulations

BARBARA F. KIMMEL
D.D.S.

*With all our love
and great pride*

POP and TANYA
and the entire family

Dear PDW,

A mere "thank-you" does not begin to return all that we have been given. Your generosity is a rare phenomenon. You have taught us more than you will ever know.

Thank-you from the entire class of 1990

TO THOMAS
and
THE CLASS OF 1990,

CONGRATULATIONS
and
MUCH SUCCESS IN YOUR ENDEAVORS IN
DENTISTRY.
JOHN, GARI AND CHRISTINA BAZDEKIS

CONGRATULATIONS

TO THE CLASS OF 1990

From THE GABLE FAMILY

CONGRATULATIONS
AND BEST WISHES FOR
HAPPINESS AND SUCCESS TO

DR. PHILLIP L. EPSTEIN
AND THE CLASS OF 1990!

DR. AND MRS. DANIEL D. EPSTEIN
AND FAMILY

Congratulations

To our daughter

Dr. Shirin Yasrebi

We all knew you would make it.
We are very proud of your accomplishment
Your hard work and determination made
your dream a reality.
With all our love and best wishes,

Mom, Dad, Sheila and Susan

e

*Congratulations
to our special dentist*

Dr. Patricia Alvarez

*We are all very proud of your
hard work and accomplishments,
Te queremos siempre,*

*Mami, Papi, Liliana, Mike,
Elisa Marie and Tia Ines*

*Congratulations
to my Godmother and
very favorite "titi"*

*Dr. Patricia
Alvarez*

*Love you,
Elisa Marie*

Dear Neil and Gina:

Congratulations are in order
It is decreed
For you both have completed
Your Doctor of Dental Degree
A Job well done, we all admit
Success to both of you, we do submit

Love,
Mom, Dad, Michele, Dominic and Dahlia

Lionel,

Congratulations and Our Very Best
Wishes For Success in Your Career.

Mom, Dad, Tony, Jeff and
Grandma

With pride we congratulate

Dr. Alan Rothstein

and his fellow graduates.

From: Ann and Bill Rothstein;
Mel and Gloria Rothstein and family
"Love you"

Dr. Richard B. Fisher:

Knowing always what you wanted,
you reached for the best in life and
you succeeded. "Congratulations!"

The future is brighter now and may
all your expectations become a reality.
We all are so very proud of you.

Love always,
Dad, Mom & Jasen

On His Many
Accomplishments.

Love
the OKAY Family

To A Wonderful Son-in-law
Dr. Elliot Michael Weidman
Mazel Tov!
We love you and couldn't be more
proud!
Love
Mom, Dad and Lori

Dear Elliott

Maybe now I'll go to the dentist!! I
love you very much, I'd do it all over
again. You'll always be my C.P.C. even
if I have to call you Doctor now.

Love,
Anita

To the two BEST PARENTS in the world, Eleanor and Raymond Gnizak:

THANKS MOM AND DAD

for the emotional and financial backing
that I needed to get me through four
long years of Dental School!

LOVE,
NANCY

**Dear Dr. John
Bacharach,**

To a caring, dedicated man:

We missed you during the last part of our Senior year. Thank you for putting so much of yourself into our education here. You were very special to us and we hope that the classes behind us will be able to know you the way we did.

All of Our Love,
CLASS OF 1990

A BIG THANKS to Dean Thomas Cangialosi and Barbara Stewart for the enormous task of writing and sending out thousands of recommendations for the Class of 1990! Just to let you know your efforts were appreciated . . . THANK YOU!

An Editor's Note: From Nancy Gnizak, Editor-In-Chief

This book was quite a feat. Little do you realize. It was a first for a lot of things. It was the first time we had a cohesive theme that included literature, the first time we included basic science courses starting with the first year of Dental School, and the first time we set out to include photographs of *ALL* faculty. Though we tried, we still could not get a complete photo album of each and every one instructor. Those part-time and ghost instructors were particularly a challenge to catch. But for all those instructors not included, we would like to apologize profusely.

I would also like to give special credit to my two co-editors, Jessica Chung and Gina Lodolini. If you only knew how many all-nighters we pulled to give you a book of which we all could be proud. I honestly can say this book contains the heart and soul of at least 5 people: Me (Nancy Gnizak), Jessica, Gina, Sheila Bahadori and Ken Lacks, the writer for our theme pages. Although this book did not come out in the Spring of our Senior Year, we think the results of the extra time spent were worth it.

I also need to thank the heroic fund raising effort carried out by our business editor, Sheila Bahadori. This woman inspired more faculty support than in any other previous year, largely due to her charm, wit and perseverance. (WAY TO GO SHEILA! WAY TO GO FACULTY!) Her efforts, flanked by Lester LeBlanc, (WAY TO GO SHEILA! made the extras possible.

Our staff would also like to thank Renee Sonneberg, Monique Rey, Judy Blazer and Steven Lepowsky for helping us with fund raising. Thanks Renee- you really hustled!

We also would like to thank Doug McAndrews for his generous donations of superb photographs, advice, and use of his professional camera which we used to take Senior portraits.

A special word of thanks needs to go to:

Dr. Danial Epstein for caring about this production.

Dr. Sanford Salz, our yearbook faculty advisor, that kept us on course.

Dr. Martin Davis, who had a watchful eye under which we were given gentle encouragement to produce a wonderful yearbook.

We wanted a book that included all Seniors, that we would enjoy for years to come and that accurately recorded our feelings while in dental school. So ENJOY! We hope you like it.

GRADUATES

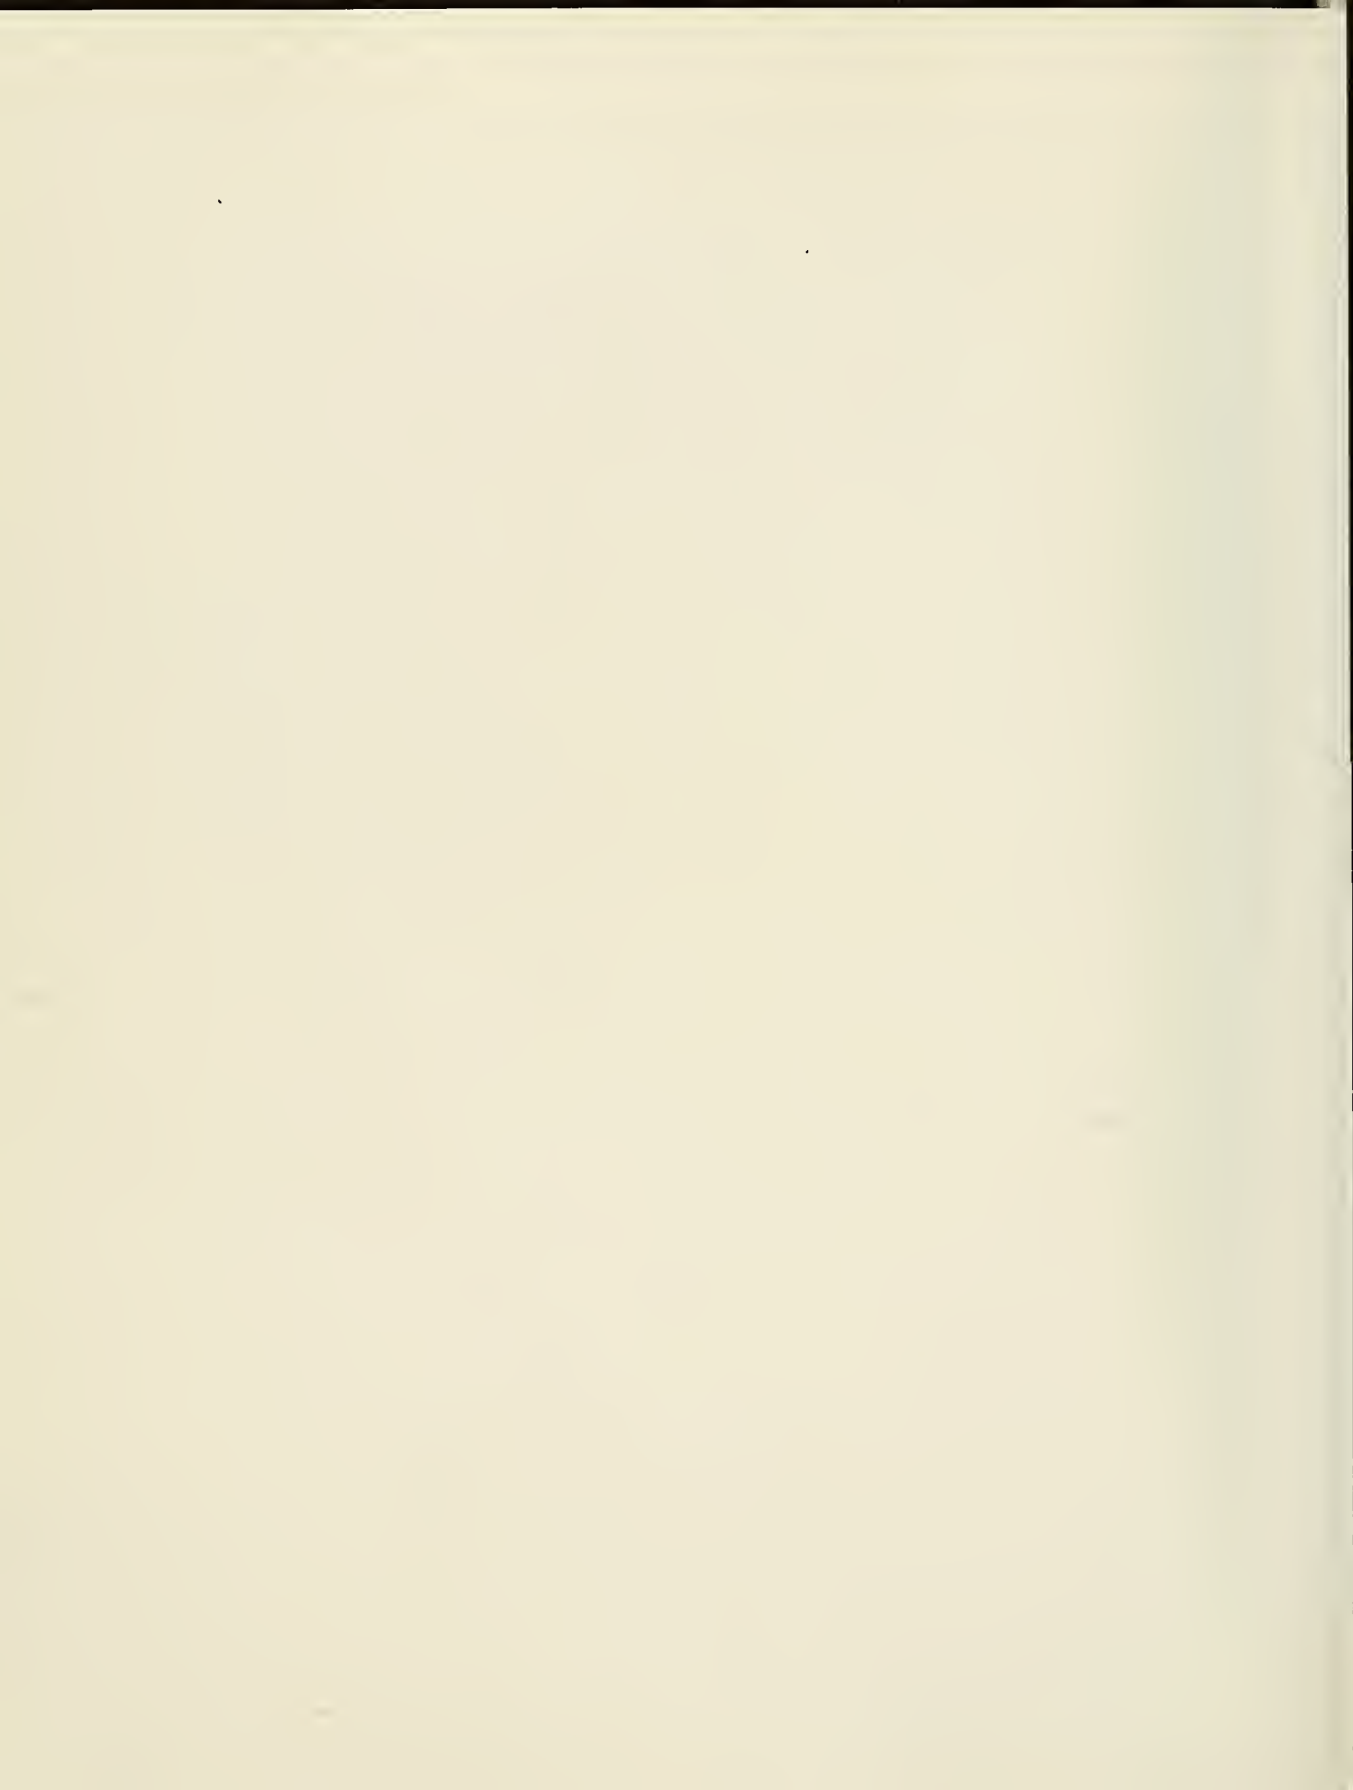

You're A Doctor Now

In the days following graduation, everyone started tying up loose ends and an odd feeling of nostalgia overcame us for a place we couldn't wait to leave. We shared an experience that binds us as alumni of a prestigious institution. If our years here were arduous, the greatest reward for our work came from within, as it will during our careers. Our personal lives begged for a little attention and our last few patients clung until the very end and we started to hold our heads high, smile a lot and look toward the future. Graduation signals not the end, but the beginning. It is exciting to imagine what might be in store . . . houses, cars, a nice life. Hopefully the Wonder Years will never end.
